Blox® Components

Designed to work together

Blox® is the name for our specialized collection of StructureLite components designed to work with square profile. The Blox® line includes square profile, hub and corner connectors, mounts, covers and inserts for square profile. These components are also compatible with our other product lines to expand your creative display opportunities.

Square Profile

90° & 180° double-slotted profile

Endless display options begin with two styles of square profile. Hold panels and inserts while creating corners and end-to-end connections to build out your designs.

Square Profile Hub

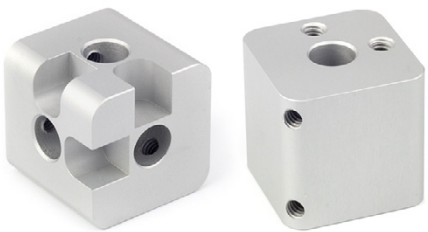
The Blox® profile hub

The innovative Blox® hub extends design options by creating multiple attachment points. Extend your structure, or create additional mounting connections for your displays.

Blox® Corners

Connect square profile

This unique cube creates corner connections with square profile. It's the key to creating sturdy rectangular structures with our Blox components.



Square Profile Mounts

Floors, ceilings & surfaces

Mounting installations with square profile is easy. Our square surface-mount can attach to most surfaces with four mounting screws.

Finished Ends

Complete your design

Square end-caps and profile inserts ensure your completed design has a tight fit and an elegant, finished look.
